

The Los Angeles Memorial Coliseum is a historic landmark that has hosted an unprecedented lineup of the world's greatest appearances & performances. The stadium has been home to the Dodgers, Rams, and USC Trojans, two Super Bowls, and two Olympics, with another scheduled for 2028. The Coliseum seats over 93-thousand spectators.

## KEY ACHIEVEMENTS

Built to withstand extreme seismic and wind loads

Designed to be relocated as four individual two-story press boxes

Strong roof that is used as camera deck

Allows work to continue behind the interim press box on new construction

Minimal site disruption for placement and removal of press box

Provides sufficient space for game day operations of college and professional games

The 95-year-old LA Memorial Coliseum is undergoing an extensive two-year renovation to update the fan experience as well as build a completely new press box and luxury suites. During the renovation, the landmark will continue to host a rigorous schedule of events and must remain fully functional. The renovation began immediately following the final football game in 2017, but the new press boxes would not be ready until the 2019-2020 season, so the LA Coliseum commission needed a fully functioning, stylish, and quick delivery solution for the 2018-2019 season. The Commission turned to Sightlines Inc., one of Whitley's distributors for a solution.

Sightlines along with Whitley designed and built a relocatable two-story, eight-module press box that "sits" in front of the ongoing construction of the new press box & luxury suites. The location also called for special touches such as building for increased seismic load capacity and increase wind load. Whitley's relocatable press suite meets or exceeds the strict California construction codes. To minimize costs on this project, the California code-compliant units were built in low-cost Indiana.

The customer also brought forward a "green" mindset, they wanted to design the press box, so it could easily be reused after its service at the Coliseum. Our eight-module building system can be re-purposed as four individual two-story press boxes or the customer may divide the units and re-configure the units in many other ways.

Cost savings, stylish design and on a very short schedule, is what Whitley & Sightlines did for the LA Coliseum, and what we can do for you. Call us today.
